LumaChrome colour shift foil
Exceptional colour, impact, and durability

PROVEN
LumaChrome™ security foil has been used in thirty banknote denominations and multiple secure ID applications issued in over ten countries.

SECURE
LumaChrome provides striking colour transitions that are extremely difficult to simulate, requiring sophisticated production equipment and specialized knowledge in thin-film optics to produce.

EASY TO USE
LumaChrome offers easy, intuitive authentication through a colour shift from one colour to another. It is simple to explain and easy to recognize at considerable distances, multiple viewing angles and variable lighting conditions.

DURABLE
LumaChrome experiences virtually no degradation over the lifetime of the substrate and can be readily converted into multiple application formats for integration into banknotes, secure documents and government IDs.

EXAMPLE COLOUR SHIFTS
- Magenta to Gold
- Magenta to Green
- Green to Blue
- Green to Magenta
- Blue to Magenta
- Gold to Green
